Upset Recovery Training

Prevailance Aerospace is an FAA Part 141 certified provider of Upset Prevention & Recovery Training (UPRT), offering safety-focused airborne training that strengthens the skills of each and every pilot. Training programs address the leading causes of loss of control – in-flight (LOC-I), the role of startle and surprise in aviation mishaps, and teach repeatable and transferable recovery techniques. Pilots train in Extra 330s, designed with the highest safety margin in the industry, and practice the skills required to prevent and subsequently recover from aircraft upsets, stalls, and spins. Prevailance Aerospace instructors are former U.S. military instructor pilots with decades of experience operating in the most dynamic environments. www.prevailance.com

Fatigue Risk management
Solutions

Pulsar Informatics is an IS-BAO I3SA certified company specializing in systems that help organizations reduce fatigue-related risk and achieve peak performance. Fleet Insight enables safety managers and schedulers to proactively evaluate fatigue across their entire operation's schedule and formulate mitigation strategies. Fatigue Meter Pro Planner is used by pilots, flight attendants, and maintenance personnel to evaluate their individual flight and duty schedule. www.pulsarinformatics.com

Cyber Security Audit and
Consultation

Satcom Direct's SD Data Center brings enterprise-level security audits to data transmissions on the ground and in the air. SD's compliance experts use a consultative approach to provide aircraft cyber security audits focusing on both the cabin and the ground network. The audit addresses cyber security issues, best practices in network design, and policies and procedures, all to ensure passenger data is classified and properly protected. www.satcomdirect.com

Scenario Based
Hypoxia Training

Southern AeroMedical Institute (SAMI) is the prime research institute regarding the phenomena of Slow Onset Hypoxia. SAMI's decades of research have improved the way aviators around the world prepare themselves for oxygen contingencies. The patented DeSat Training program is the closest possible re-creation of the dynamic and task saturated environment a pilot will face during a pressurization event. This includes a medical understanding of hypoxia, FAA standard mask donning procedures, ATC communication, crew coordination, and post event training – all while operating at true altitudes and utilizing oxygen reserves. www.SAMI-AeroMedical.com

Safety and Training for
Unmanned Aircraft Systems

DARTdrones, the nation's leading drone training company, offers courses in 40+ cities across the U.S. DARTdrones offers basic flight training classes, Part 107 Airman Knowledge test prep courses, advanced industry specific training, and UAS program implementation consulting services. DARTdrones has been helping individuals and organizations develop safe and efficient sUAS programs and continues to keep new and developing safety considerations at the forefront of their curriculum development. www.dartdrones.com
